

01

Real Wood Digitally Stained Veneer

With new innovative technology, NAPLY can recreate almost any veneer on Baltic birch and other wood products. By scanning real wood veneer, we can replicate and or alter the file specifically tailored to your needs. We then digitally stain the image directly onto Baltic birch and other substrates.

Branding and Color Matching

A company's identity is important and consistency is key. We can match Pantone and other spot colors on our white opaque coated panels. Our high resolution printer outputs crisp lines for text and vector artwork with a multitude of colors options available.

Photography and Art Printing

Have a digital art file or photograph that you need printed in high resolution? We can print up to 126" x 63" at 1200 dpi. We will make your prints shine and they can literally be larger than life at 10ft x 5ft!

Manufacturing Capabilities

Once your panel is digitally stained or printed, we can also manufacture components using our CNC routers and saws. We have experience in producing parts for use in a variety of applications including contract furniture, interior paneling systems, event flooring, wayfinding systems, and more.

Lead Time, Costs, and Other Info

The lead time for digitally stained and printed panels is about 2-4 weeks depending on our current operation schedule. We know deadlines are tight and we are flexible enough to work with our clients if need arises. Once a file is decided upon and finalized, repeat orders are a breeze.

Pricing starts at material cost +\$0.75/square foot a side.
